**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Patch on 04/07/2009.

**IN THE CLAIMS**

Please amend claim 21 as follows:

21. (currently amended) A syringe with a retractable needle, comprising a reservoir having an open rear end, a piston element slidably inserted in said rear end, the piston having an end facing toward the inside of the reservoir, the reservoir having a front end open and surrounded by a lip, a needle carrier carrying said needle and slidable in said lip toward and away from said piston, a spring within the lip continuously urging the needle carrier toward the piston, an inwardly extending shoulder on the lip, an inwardly extending shoulder on the needle carrier, and a flexible element secured to and movable with the needle carrier, said flexible element having portions that engage with said shoulder on the lip when the spring urges the needle carrier toward the piston thereby to limit movement of the needle carrier toward the piston, said flexible element having a member thereon engageable by the piston to press a portion of the flexible element into the needle carrier, said portion of the flexible element having hooks

Art Unit: 3763

thereon that, when pressed into the needle carrier, engage beneath the shoulder on the needle carrier to retain the flexible element in a deformed position in which the needle carrier is deformed out of contact with the shoulder on the lip, whereupon, when the piston is retracted in a direction away from the needle, the spring can press the needle carrier and the needle and the deformable element in a direction toward the piston thereby to retract the needle within the lip, said flexible member having a plurality of lateral lugs thereon of V- shaped configuration with each having an apex, the said apex of the V being the portion of the flexible member that engages beneath the shoulder on the lip.

#### ***Acknowledgements***

The Examiner also acknowledges the amended abstract filed 03/16/2009.

#### ***Allowable Subject Matter***

Claims 21-22 and 25-26 are allowed over the prior art of record as amended in the 3/16/2009 reply and as amended in the Examiner's Amendment.

The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed device of a disposable syringe having a double hook needle carrier, causing, after a piston stroke toward the end of the socket element of the needle, allowing retraction within the reservoir during the reverse stroke of the piston. A spring between the double hook element and the end of a reservoir lip, when compressed, maintains the double hook element in its position, and when extended, acts to cause the return of the needle within the reservoir.

The closest prior art of record is Toft et al. (USPN5,407,436) and Caralt Batlle (UPSN5,114,410), however these references do not disclose the device as claimed or described above.

Regarding claim 21, the closest prior art of record fails to teach among all the limitations or render obvious the specific needle carrier comprising a deformable element with a plurality of lateral lugs of V-shaped configuration each with an apex that engages a shoulder on the lip of the inside syringe barrel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
